Bangalore, India | +91 6363140535 | prashastvats@gmail.com | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building and shipping technical solutions for international enterprise clients. Skilled across the full stack: C#, React, React Native, Python. With hands-on experience with AI integration into real products. Looking to bring this breadth into a product-focused startup where ownership and iteration speed matter.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, HTML5, CSS3, Python

Frameworks & Libraries: .NET Framework, React, React Native, ADO.NET, MVC

Databases: Microsoft SQL Server, MariaDB, MongoDB, Appwrite

Tools & Platforms: Github, Docker, Jenkins, JIRA, Figma, Selenium, Visual Studio, VS Code, Cursor

AI/ML: OpenAI API, Prompt Engineering, Computer Vision (ResNet, FAISS), Custom Chatbot Development

SOFT SKILLS

Fist Principle Thinker • Problem-Solving & Root Cause Analysis • Agile/Sprint Development • Technical Documentation • Cross-functional Collaboration • Adaptability & Quick Learner

PROFESSIONAL EXPERIENCE

Software Engineer | **Mphasis Ltd.** | *May 2023 - Present*

Delivering automation tools and diagnostic solutions for HP client projects across firmware validation and printer diagnostics.

Client-Facing Projects:

STB Plugin Development & Maintenance | *Mar 2025 - Present*

- Serve as technical point of contact for QA engineers using STB, HP's internal firmware testing platform, handling support tickets and troubleshooting issues.
- Developed AI chatbot using Copilot to onboard new engineers on GFriend automation framework. Placed 2nd in 8-developer competition for best implementation.
- Built chatbot capabilities for script explanation, syntax guidance, and automated code generation, reducing new engineer ramp-up time.
- Built and maintained test automation plugins for native printer apps such as Copy and Scan and third party solutions such as Papercut, MyQRoger, ScanAI and more, ensuring compatibility with firmware updates and resolving user-reported issues through JIRA.
- Developed custom AI model using ResNet and FAISS to identify printer UI elements, reducing Azure AI dependency and cutting operational costs.
- Containerized vision API server using Docker; created custom Docker images and Docker Compose YAML configurations for deployment across Windows and Linux.
- Created documentation and troubleshooting guides for QA teams to improve self-service resolution.
- Resolved 15+ JIRA tickets monthly with 80% first-contact resolution. Supported 30+ QA engineers across 3 time zones.

LFP Automation – HP Spain Team | *Nov 2024 - Feb 2025*

- Collaborated directly with HP Spain engineering team to deliver printer automation solutions.
- Developed GFriend scripts and plugins to track printer task performance via MariaDB, enabling diagnostics and analytics for client teams.
- Provided technical support and troubleshooting for automation issues, achieving 20% faster performance measurement.
- Contributed to success of Mphasis' first European client engagement, resulting in continued partnership and on-premises lab setup.

Internal Projects:

Printer Diagnostic Tool | Feb 2024 – Jun 2024

- Built a .NET MVC web application to scan and diagnose network printers, fetch printer details using OIDs, and automate firmware upgrades with Selenium.
- Developed frontend and backend components for data visualization and user interaction.
- Used this tool to analyze which printers were awake, sleeping, in error state, or in boot mode.

Training Projects:

Job Search Platform | Tech Stack: .NET MVC, ADO.NET, MS SQL Server

- Multi-role web platform (applicants, companies, admins) with job posting, search, filtering, and application tracking built on .NET MVC and ADO.NET.
- Designed relational database schema in MS SQL Server with normalized tables across users, companies, jobs, and applications; implemented role-based access with JWT authentication.
- Built automated email notification system via Google SMTP and full CRUD workflows for all three user roles.

Online Vaccine Management System | Tech Stack: Angular, .NET MVC, SQL

- Full-stack web app for appointment booking, patient registration, and admin dashboards built with Angular and .NET MVC.
- Designed relational SQL database across vaccines, hospitals, and patient records; implemented JWT-based role-based access control for patients, admins, and hospital staff.
- Built responsive UI with form validation and data visualization components.

PROJECTS

Event Intelligence Dashboard | In Development

- AI-powered webapp that aggregates news from multiple sources and auto-generates summaries for user-defined events (box office runs, elections, etc.), eliminating manual tracking.
- Stack: React, News APIs, Claude/OpenAI API for summarization.

AI Powered Resume Analyzer | [Live Demo](#) | February 2026

- Frontend tool that analyzes a resume against a job description using the OpenAI API, providing match scoring and gap analysis.
- Built with React; implemented full CI/CD pipeline using Jenkins branch-based PR workflow with automated build validation before merge.

React Native Movie App | [Live Demo](#) | April 2026

- Full-stack mobile app with TMDB API integration for movie discovery; features include debounced search, bookmark functionality, and a profile section tracking search and save activity.
- Backend via Appwrite (BaaS); custom trending algorithm: search frequency drives popularity ranking. Deployed web version on Vercel.

EDUCATION

B.Tech, Electronics & Instrumentation Engineering | 2018 - 2022

Manipal Institute of Technology | CGPA: 7.06

CERTIFICATIONS

Mphasis TalentNext: React.js, Angular 10, TypeScript, SQL with MySQL, HTML5 & CSS3, Git, GitHub Copilot, Agile Development

Other: AI (SmartKnower), Interactive Python (Coursera), UX Design (Coursera)

ACHIEVEMENTS

- 2nd Place - 132nd International MUN (2022)
- Top 5 - TCS Techbytes Regional Quiz (2021)
- Core Member - Team Combat Robotics, Manipal (2019–2021)
